

QA Bug Report Portfolio

Mobile Game Testing: Piano Beats & Cover Fire

PROJECT: PIANO BEATS (RHYTHM)

BUG-PB-001

SEVERITY: HIGH

Summary:

Audio-Visual Latency Desynchronization during "Hard" difficulty tracks.

Description:

In high-BPM songs (160+ BPM), the visual note tiles begin to drift out of sync with the audio beat after 45 seconds of gameplay, resulting in unfair "Miss" registrations.

Steps to Reproduce:

- Launch Piano Beats and select the track "Neon Velocity".
- Set difficulty to "Hard".
- Play the song continuously for at least 60 seconds.
- Observe the alignment of the tiles hitting the receptor bar against the drum beat.

Expected Result:

Note tiles should strike the receptor bar exactly on the audio beat for the entire duration of the track.

Actual Result:

Visual tiles arrive approximately 150ms before the audio cue, causing player timing errors.

PROJECT: COVER FIRE (TACTICAL SHOOTER)

BUG-CF-042

SEVERITY: MEDIUM

Summary:

Environmental Collision Clipping in Mission 08 "Urban Siege".

Description:

Players can clip into the geometry of the "Concrete Barrier" asset near the secondary objective, allowing them to shoot enemies through walls without taking damage.

Steps to Reproduce:

- Load Mission 08: Urban Siege.
- Move to the courtyard area near the burned-out vehicle.
- Approach the L-shaped concrete barrier on the left side.
- Perform a 'crouch' and 'prone' transition while moving toward the corner.

Expected Result:

Character model should be physically blocked by the barrier's collision box.

Actual Result:

Character enters the internal geometry of the barrier; camera view becomes obstructed but weapon remains functional.
